

BellSouth ONA Deployment

April 15, 2001

Performance and Fault Management Service (PFMS)

Real Time Access to Exchange Network Testing Facilities and Pass Through Diagnostics to User may be met with BellSouth's Performance and Fault Management Service (PFMS). PFMS is available through individual case basis/special assembly arrangement to any customer who requests it. BellSouth has not received any requests for PFMS.

BellSouth's FlexServ[®] service also meets some of the diagnostics requested for Pass Through Diagnostics To User. For deployment information regarding FlexServ, see deployment projections for Network Reconfiguration.

DS0-B Interface, DS0-B Transport Facilities, Derived Data Channel, and Derived Data Channel Service

The above referenced services provide or are associated with the provision of Clear Access to Derived Channel capability. BellSouth has effective tariffs for these services in applicable jurisdictions. Since the tariffs were filed, there has been an absence of demand for these services. Due to this absence of demand, deployment of these capabilities is currently suspended.

REPORT #2

DISPOSITION OF NEW ONA SERVICE REQUESTS

DISPOSITION OF NEW ONA SERVICE REQUESTS

April 15, 2001

The Commission requires BellSouth to list all requests for new ONA capabilities received during the previous year under the ESP Request Process. The Commission also requires BellSouth to report annually on the final disposition of new service requests previously identified as needing further evaluation.

BellSouth received the following requests for new ONA capabilities from Enhanced Service Providers (ESPs) in 2000.

Request # 1 - 2 These ESP requests were for BellSouth to provide the ability for an ESP to order the Call Forward/Don't Answer capability on behalf of ESP's customer on a bulk basis.

BellSouth concluded that the requested capability could be satisfied via use of its Vendor Service Center personnel. ESPs submit bulk requests via use of Excel spreadsheets. The Excel spreadsheets may be transmitted either electronically or by FAX machine. ESPs are required to obtain customer approval prior to submitting such requests to BellSouth.

Request #3 - 6 These ESP requests inquired about the availability of SDSL- symmetric DSL services in BellSouth's DSL product suite.

BellSouth responded that it is currently developing the necessary operating system to support this type of service via the ITU standard G.SHDSL with product availability scheduled for late 2001.

Request #7- 10 These ESP requests inquired about the availability of SLAs – Service Level Agreements- for BellSouth's DSL products.

BellSouth responded that it is investigating the logistics of structuring such an agreement for its current business class DSL products. The isolation of latency is one of the many issues to be worked out.

REPORT #3

**ONA SERVICE REQUESTS PREVIOUSLY
DEEMED TECHNICALLY INFEASIBLE**

ONA SERVICE REQUESTS PREVIOUSLY DEEMED TECHNICALLY INFEASIBLE

April 15, 2001

The Commission has required BellSouth to report on the status of ONA service requests it had previously deemed infeasible.

As previously reported, BellSouth continued its efforts to upgrade the Simplified Message Desk Interface (SMDI) capability with an inter-switch functionality. Inter-switch SMDI makes it easier for ESPs to use the service by no longer requiring that they have connections to multiple central offices. ISMDI is effective in the interstate access tariff and in the General Subscriber Service Tariff in all nine states. During 1999, BellSouth modified its ISMDI service offering. A characteristic of this modification is the provisioning of SS7 routing for Message Waiting Indication (MWI) using a specific Transaction Capability Application Part (TCAP) message over an SS7 link. This arrangement may be used by voice message service providers to activate MWI for messaging subscribers served by a compatible wireless network.

BellSouth also continued to deploy Call Transfer with DID in 1999. Call Transfer with DID is the ability to perform a call transfer on a DID trunk to access outside dial tone. As previously reported, BellSouth initially provided this capability to ESPs via individual case basis (ICB) arrangements, while it continued its efforts to develop a generally available tariff offering. Call Transfer with DID is now tariffed in all nine states.

ESPs requested a capability for Single Number Access for Multiple Locations (NC #40). This capability allows customers with multiple locations to advertise one telephone number. BellSouth previously reported that its ZipConnectsm and DataReachsm services might meet this capability. Due to changes in technology and limited demand, BellSouth filed tariffs to grandfather ZipConnect in all nine states and also discontinued offering DataReach in eight states. BellSouth's ability to continue offering ZipConnect, DataReach, or any new single number access services will be impacted by North American Numbering Plan Administrator (NANPA) decisions. Recently, when new NPAs have been implemented in the BellSouth region, NANPA has denied BellSouth assignment of the 203 NXX in the new NPAs. The 203 NXX is used to provide ZipConnect and DataReach Service.

As described in previous reports, BellSouth also continued its efforts to improve existing capabilities to more fully meet ESP needs. One previously reported example of this effort is BellSouth's development of CrisisLinksm service, which provides an alternate means of meeting Route Diversity (NC #77) and Automatic Protection Switching (NC #78). Tariffs for CrisisLink are effective in all nine BellSouth states. Another example is BellSouth's expanded Message Waiting Indication (MWI) service. BellSouth offers two visual message waiting alternatives, in switches and areas compatible with BellSouth's network. One alternative available to BellSouth's customers is use of customer premises equipment in conjunction with stuttered dial tone. The other alternative is utilization of inband frequency shift key (FSK) signaling. This

alternative is available via BellSouth's Message Waiting Indication - Audible/Visual (MWI-A/V) Service. MWI-A/V is tariffed and effective in all nine states.

REPORT #4

SS7, ISDN, AND IN PROJECTED DEPLOYMENT

SS7, ISDN, AND IN PROJECTED DEPLOYMENT

April 15, 2001

In its December 19, 1991, Order reviewing Open Network Architecture plans (CC Docket No. 88-2), the Commission directed each BOC to provide annual reports on the deployment of Signaling System 7 (SS7), Integrated Services Digital Network (ISDN), and Intelligent Network (IN) by percentage of access lines served system-wide and on a market area basis. This report contains six tables which provide these projections for BellSouth.

Table 1 provides a summary of projected CCS7 (Bellcore TR-TSY-000317) deployment, based on access lines served by CCS7 switches. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 2 represents projected deployment plans for CCS7 Network Interconnect (Bellcore TR-TSY-000394) (CCSAC) capabilities based on central offices being equipped for interconnection. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 3 provides a summary of Basic Rate ISDN deployment. The access lines counted in these percentages are lines served by central offices that are or will be equipped for ISDN capability. Equipment provisioning beyond the initial capacity will be based on market demand and forecast. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 4 estimates the deployment of Primary Rate ISDN. The access lines counted in these percentages are lines served by central offices that are or will be equipped for Primary Rate ISDN capability. Equipment provisioning beyond the initial capacity will be based on market demand and forecast. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 5 provides projections for the deployment of IN & Advanced Intelligent Network (AIN) 0.0 capabilities. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.

Table 6 provides projections for the deployment of AIN 0.1 capabilities. These projections are based on current plans, but are subject to change due to financial, regulatory, market, or other considerations.
